

## **Mrs. Chapman's Calculator Rules and Regulations**

1. Respect the equipment.
2. Keep your calculator clean and in good working order.
3. Use a calculator to check your work. "Remember: You are the doing tool, the calculator is the checking tool."
4. **AFTER you learn how to calculate answers on your own** using calculators is a fine thing to do, even for basic multiplication facts. (When in doubt about whether it's ok...ask!)
5. You must have a calculator license to use the calculator in class. (pass 2 consecutive timed tests with 100%)
6. Use only the calculator assigned to you.
7. It is your responsibility to get your calculator at the beginning of class and put it up at the end of class. (If you forget, you can not get the calculator after the lesson begins. You will not be able to use the calculator for the day.)

**8. ONLY USE THE CALCULATOR FOR GOOD!**
