

Are Students Connected to GISD WiFi or 3G/4G?

Georgetown ISD Bring Your Own Device (BYOD)

How to Determine if Students are Connected to GISD Wireless (WiFi) Network or to 3G/4G

The GISD BYOD Guidelines require students who want to use the Internet at school to connect their device to the GISD WiFi, not to their personal 3G/4G data connection.

Most devices display how they are connected to the Internet at the **top of the device**, usually in a corner. You can look at the top of their device for the WiFi symbols shown below.

	Apple iPhone/iPad	Android	Windows
WiFi Devices that are connected to a wireless network will display a WiFi symbol, which usually looks like three or four curved bars.			
3G/4G Devices that are connected to a personal data connection (3G or 4G signal) will display the 3G or 4G.
